

Trust law v2 (D-051): evidence-bounded exclusion

D: $\bar{p} \geq \theta_{\text{on}}$ for T_{on}
(hysteresis, calibrated $\bar{p}$)

Jamming evidence (AGC drop, C/N0 loss, lock loss) does NOT block recovery —
only physical spoof evidence E_s does (clock/drift jump $>5\sigma$, x-sat C/N0 corr.,
meaconing C/N0 bump ≥ 3 dB, abrupt position-innovation gate excursion).
